

## Supplementary material

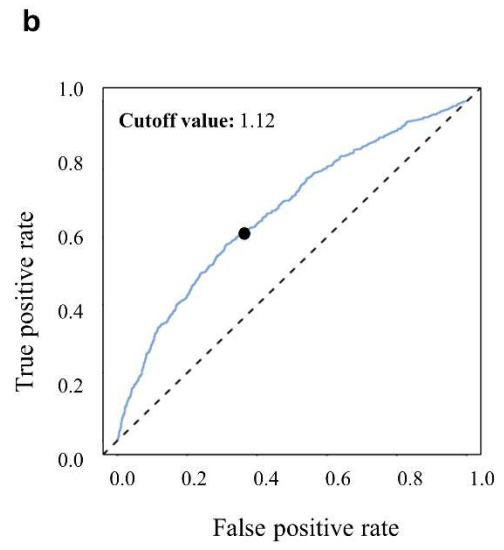

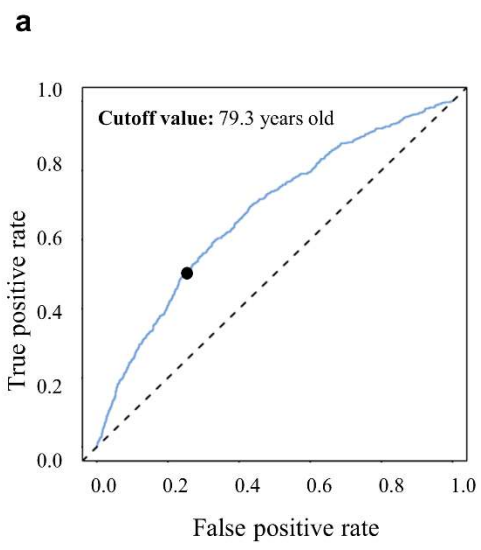

### Supplementary figure

**Figure S1** The receiver operating characteristic (ROC) curves of biological age (A) and age gap (B). The black solid dots represented the cutoff values. ROC indicates receiver operating characteristic.

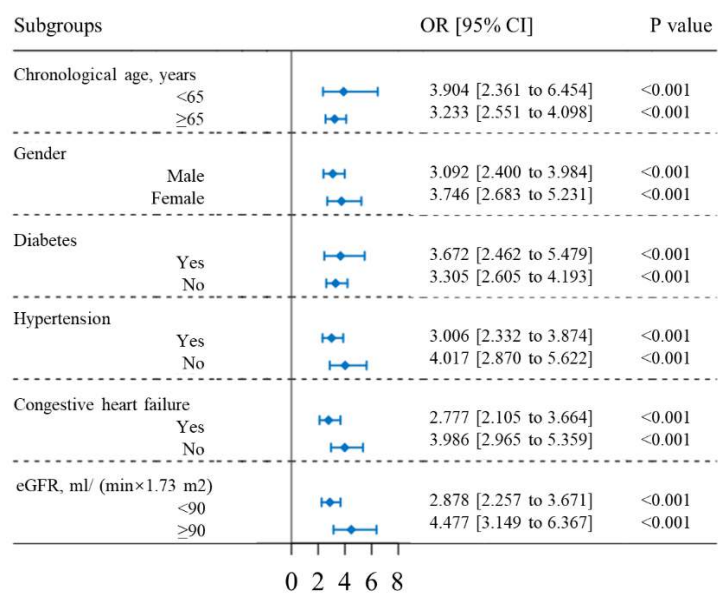

**Figure S2** Subgroup analysis between biological age and CA-AKI. Patients were dichotomized according to chronological age ( $\geq 65$  vs.  $< 65$ , years), gender (male vs. female), diabetes (yes vs. no), hypertension (yes vs. no) and congestive heart failure (yes vs. no). The abbreviations are consistent with the above.

**Figure S3** Subgroup analysis between age gap and CA-AKI. Patients were dichotomized according to chronological age ( $\geq 65$  vs.  $< 65$ , years), gender (male vs. female), diabetes (yes vs. no), hypertension (yes vs. no) and congestive heart failure (yes vs. no). The abbreviations are consistent with the above.
